Built Tough for Replacing Existing Truck Scales

Rice Lake Weighing Systems' SURVIVOR truck scales utilize up to 25 percent more steel content than competitor's truck scales. The OTR-LP was designed as a steel deck replacement scale solution with a low profile and easy installation in pre-existing foundations used for non-Rice Lake truck scales.

The OTR-LP features a 5/16- or 3/8-inch diamond plate deck and a rugged I-beam construction. Eight-inch, wide-flange beams minimize deflection and prolong the life of the weighbridge. Widths are available in 10 or 11 feet, and the profile ranges from 11 to 16 inches with a three-to-eight inch cleanout.

Long-lasting Value

SURVIVOR OTR truck scales are designed to accommodate a minimum of 250 trucks per day for 25 years without weighbridge fatigue—equivalent to more than two million weighments. Rice Lake's five-year parts warranty covers load cells, junction boxes and suspension systems to ensure worry-free operation. OTR truck scales also include a lightning protection package, and weighbridges are warranted against defects in materials and workmanship for five years from delivery.

Ideal for Existing Foundations

The OTR-LP is specially designed for easy installation in existing foundations built for a scale with an 11 to 16 inch profile. The OTR-LP saves the time and money of constructing a new foundation when purchasing a replacement.

SURVIVOR OTR-LP

Performance

- Up to 200,000 pound gross weight capacity
- 90,000 pound concentrated load capacity (CLC)
- 90,000 pound dual tandem axle rating (DTA)
- Span deflection ratio of 1:1100 for legal highway loads
- 75,000 pound capacity load cells and mounts

Advantage

- Ideal for replacing truck scales with existing foundations
- Fast installation
- Easy fit in existing foundations
- 5/16 or 3/8-inch steel deck plate
- Optional tread runners for increased tire support
- Optional channels for roll-off applications in transfer stations

Custom Designs Available

We specialize in custom solutions including unique dimensions and profiles, existing pit and founding matching, extreme weight capacities, dump-through modules and more.
